

- EARLY RESEARCH OPPORTUNITY FOR BACHELOR STUDENTS -

**Are you passionate about sustainable land use and intercultural collaboration?
Would you like to gain research experience in an international setting?**

What it is:

The Sustainable Village Project is a real-world laboratory located in an oil-palm dominated landscape in Jambi, Indonesia, where sustainable and locally adapted land-use and agricultural innovations are collaboratively developed.

Your research will contribute to evaluating the project's outputs and outcomes, such as:

- How capacities and actionable knowledge for sustainability are built
- Which physical or societal changes the project triggers
- How these changes affect equity, livelihoods, resource efficiency, and socio-ecological integrity

You are:

- Interested in sustainability research, evaluation, and intercultural collaboration
- Highly motivated for team-based, self-organised work
- Ecosystem Management, Agricultural Sciences or related study course, minimum 3rd semester
- Fluent in English

BECOME PART OF THE SUSTAINABLE VILLAGE PROJECT!

In an intercultural student team you will:

- Write a research proposal
- Develop your own research topic and design
- Collect and analyse data
- Interpret, document, and present your findings
- Collaborate through an online exchange format, with scientific supervision throughout the full research cycle

If you're eager to engage in meaningful sustainability research and collaborate closely with peers from Indonesia, we'd love to hear from you before 20.12.25! Please write a short letter of motivation and attach your study transcript!
