

Modulverzeichnis

Master's degree programme "Crop Protection" - referring to: Prüfungs- und Studienordnung für den konsekutiven Master-Studiengang "Crop Protection" (Amtliche Mitteilungen I 36/2012 p. 1903, last revised through Amtliche Mitteilungen I 5/2020 108)

Module

M.Agr.0003: Agribusiness Sugar Beet - an advanced education for graduate students and junior employees of the sugar supply chain (English).....	971
M.Agr.0009: Biological Control and Biodiversity.....	973
M.Agr.0010: Biotechnological Applications in Plant Breeding.....	974
M.Agr.0023: Interactions between plants and pathogens.....	975
M.Agr.0039: Molecular Techniques in Phytopathology.....	976
M.Agr.0045: Mycology.....	977
M.Agr.0056: Plant breeding methodology and genetic resources.....	978
M.Agr.0057: Plant Virology.....	979
M.Agr.0058: Plant herbivore interactions.....	980
M.Agr.0094: Basics of Molecular Biology in Crop Protection.....	981
M.Agr.0146: Nematology.....	982
M.Cp.0002: Internship.....	983
M.Cp.0004: Plant Diseases and Pests in Temperate Climate Zones.....	984
M.Cp.0005: Integrated Management of Pests and Diseases.....	985
M.Cp.0006: Pesticides I: Mode of Action and Application Techniques, Resistance to Pesticides.....	986
M.Cp.0007: Pesticides II: Toxicology, Ecotoxicology, Environmental Metabolism, Regulation and Registration.....	987
M.Cp.0008: Fungal Toxins.....	988
M.Cp.0010: Plant Pathology and Plant Protection Seminar.....	989
M.Cp.0011: Agricultural Entomology Seminar.....	990
M.Cp.0012: Weed Biology and Weed Management.....	991
M.Cp.0014: Plant Nutrition and Plant Health.....	992
M.Cp.0015: Molecular Weed Science.....	993
M.Cp.0016: Practical Statistics and Experimental Design in Agriculture.....	995
M.Cp.0017: Scientific Presenting, Writing and Publishing in Crop Protection.....	996
M.Cp.0018: Journal Club on New Topics in Crop Protection.....	997
M.Cp.0019: Basic Laboratory Techniques.....	998
M.Cp.0020: Ecotoxicological Risk Assessment for Plant Protection Products.....	999
M.Cp.0021: Plant Health Internship.....	1001

Inhaltsverzeichnis

M.SIA.E13M: Microeconomic Theory and Quantitative Methods of Agricultural Production.....	1002
M.SIA.P07: Soil and plant science.....	1003
M.SIA.P08: Pests and diseases of tropical crops.....	1005
M.SIA.P15M: Methods and advances in plant protection.....	1007
M.SIA.P22: Management of tropical plant production systems.....	1008
M.WIWI-QMW.0004: Econometrics I.....	1010

Übersicht nach Modulgruppen

I. Master-Studiengang "Crop Protection"

At least 120 C must be successfully completed within the following regulations.

1. Fachstudium

a. Pflichtmodule

The following compulsory modules worth overall 18 C must be successfully completed.

M.Cp.0002: Internship (9 C, 6 SWS).....	983
M.Cp.0006: Pesticides I: Mode of Action and Application Techniques, Resistance to Pesticides (6 C, 4 SWS).....	986
M.Cp.0007: Pesticides II: Toxicology, Ecotoxicology, Environmental Metabolism, Regulation and Registration (6 C, 4 SWS).....	987
M.Cp.0017: Scientific Presenting, Writing and Publishing in Crop Protection (3 C, 2 SWS).....	996
M.Cp.0018: Journal Club on New Topics in Crop Protection (3 C, 2 SWS).....	997
M.Cp.0019: Basic Laboratory Techniques (3 C, 2 SWS).....	998

2. Professionalisierungsbereich

a. Wahlpflichtmodule

Elective compulsory modules worth at least 66 C must be successfully completed. Students can earn up to 18 C from elective modules from the other master study programmes of the faculty of agriculture, University of Goettingen. Furthermore, maximally one issue-specific module (at maximum worth 6 C) from another faculty can be chosen.

M.Agr.0003: Agribusiness Sugar Beet - an advanced education for graduate students and junior employees of the sugar supply chain (English) (6 C).....	971
M.Agr.0009: Biological Control and Biodiversity (6 C, 6 SWS).....	973
M.Agr.0010: Biotechnological Applications in Plant Breeding (6 C, 4 SWS).....	974
M.Agr.0023: Interactions between plants and pathogens (6 C, 4 SWS).....	975
M.Agr.0039: Molecular Techniques in Phytopathology (6 C, 4 SWS).....	976
M.Agr.0045: Mycology (6 C, 4 SWS).....	977
M.Agr.0056: Plant breeding methodology and genetic resources (6 C, 4 SWS).....	978
M.Agr.0057: Plant Virology (6 C, 6 SWS).....	979
M.Agr.0058: Plant herbivore interactions (6 C, 4 SWS).....	980

M.Agr.0094: Basics of Molecular Biology in Crop Protection (6 C, 4 SWS).....	981
M.Agr.0146: Nematology (3 C, 4 SWS).....	982
M.Cp.0004: Plant Diseases and Pests in Temperate Climate Zones (6 C, 4 SWS).....	984
M.Cp.0005: Integrated Management of Pests and Diseases (6 C, 4 SWS).....	985
M.Cp.0008: Fungal Toxins (6 C, 4 SWS).....	988
M.Cp.0010: Plant Pathology and Plant Protection Seminar (3 C, 2 SWS).....	989
M.Cp.0011: Agricultural Entomology Seminar (3 C, 2 SWS).....	990
M.Cp.0012: Weed Biology and Weed Management (6 C, 4 SWS).....	991
M.Cp.0014: Plant Nutrition and Plant Health (3 C, 2 SWS).....	992
M.Cp.0015: Molecular Weed Science (6 C, 4 SWS).....	993
M.Cp.0020: Ecotoxicological Risk Assessment for Plant Protection Products (3 C, 2 SWS).....	999
M.Cp.0021: Plant Health Internship (6 C).....	1001
M.SIA.E13M: Microeconomic Theory and Quantitative Methods of Agricultural Production (6 C, 4 SWS).....	1002
M.SIA.P07: Soil and plant science (6 C, 4 SWS).....	1003
M.SIA.P08: Pests and diseases of tropical crops (6 C, 6 SWS).....	1005
M.SIA.P15M: Methods and advances in plant protection (6 C, 4 SWS).....	1007
M.SIA.P22: Management of tropical plant production systems (6 C, 4 SWS).....	1008

b. Schlüsselkompetenzen

Out of the following elective compulsory modules one module worth overall at least 6 C must be successfully completed.

M.Cp.0016: Practical Statistics and Experimental Design in Agriculture (6 C, 4 SWS).....	995
M.WIWI-QMW.0004: Econometrics I (6 C, 6 SWS).....	1010

3. Masterarbeit

Completion of the Master's thesis is worth 24 Credits.

4. Kolloquium zur Masterarbeit

Successful completion of the colloquium for the Master's thesis is worth 6 Credits.

II. Double/Joint-Degree Programm "PlantHealth"

At least 120 C must be successfully completed within the following regulations.

1. Erstes Studienjahr

At least 60 C must be successfully completed within the following regulations.

a. Pflichtmodule

The following compulsory modules worth overall 27 C must be successfully completed:

M.Cp.0016: Practical Statistics and Experimental Design in Agriculture (6 C, 4 SWS).....	995
M.Cp.0017: Scientific Presenting, Writing and Publishing in Crop Protection (3 C, 2 SWS).....	996
M.Cp.0018: Journal Club on New Topics in Crop Protection (3 C, 2 SWS).....	997
M.Cp.0019: Basic Laboratory Techniques (3 C, 2 SWS).....	998
M.Cp.0004: Plant Diseases and Pests in Temperate Climate Zones (6 C, 4 SWS).....	984
M.Cp.0005: Integrated Management of Pests and Diseases (6 C, 4 SWS).....	985

b. Wahlpflichtmodule

Out of the following elective compulsory modules four modules worth overall at least 27 C must be successfully completed.

M.Agr.0058: Plant herbivore interactions (6 C, 4 SWS).....	980
M.Cp.0002: Internship (9 C, 6 SWS).....	983
M.Cp.0006: Pesticides I: Mode of Action and Application Techniques, Resistance to Pesticides (6 C, 4 SWS).....	986
M.Cp.0012: Weed Biology and Weed Management (6 C, 4 SWS).....	991
M.Cp.0014: Plant Nutrition and Plant Health (3 C, 2 SWS).....	992
M.Agr.0094: Basics of Molecular Biology in Crop Protection (6 C, 4 SWS).....	981

c. Schlüsselkompetenzen

Licit modules comprising at least 6 C must be passed.

2. Zweites Studienjahr

At least 60 C must be successfully completed within the following regulations.

a. Pflichtmodul

The following module comprising 6 C has to be passed.

M.Cp.0007: Pesticides II: Toxicology, Ecotoxicology, Environmental Metabolism, Regulation and Registration (6 C, 4 SWS).....	987
--	-----

b. Wahlpflichtmodule

Four of the following modules comprising 24 C have to be passed.

M.Agr.0058: Plant herbivore interactions (6 C, 4 SWS).....	980
--	-----

M.Cp.0008: Fungal Toxins (6 C, 4 SWS).....	988
M.Agr.0023: Interactions between plants and pathogens (6 C, 4 SWS).....	975
M.Agr.0039: Molecular Techniques in Phytopathology (6 C, 4 SWS).....	976
M.Agr.0057: Plant Virology (6 C, 6 SWS).....	979

c. Masterarbeit

Completion of the Master's thesis is worth 24 Credits.

d. Kolloquium zur Masterarbeit

Successful completion of the colloquium for the Master's thesis is worth 6 Credits.

Georg-August-Universität Göttingen Module M.Agr.0003: Agribusiness Sugar Beet- an advanced education for graduate students and junior employees of the sugar supply chain (English)	6 C
Learning outcome, core skills: To acquire profound knowledge in the following fields of the sugar value chain: breeding and other upstream sectors, technology of the sugar and bioethanol industry and biogas production, other downstream sectors, sugar market, agricultural policy. To identify in detail causal relationships in the process management sugar on the basis of recent scientific knowledge. To intensify the knowledge by interpreting scientific figures and tables and their statistics. To gain from the unique opportunity of an advanced education particularly suitable as an on-the-job training program. To take the opportunity of social networking with not only other graduate students but external participants from different professional backgrounds and sugar beet growing countries worldwide, too.	Workload: Attendance time: 54 h Self-study time: 126 h
Course: Agribusiness Sugar Beet - an advanced education for graduate students and junior employees of the sugar supply chain (English) (Block course, Lecture, Excursion) <i>Contents:</i> In comparison to other cash crops the refining of sugar from sugar beet is characterized by a considerable degree of cooperation between agriculture and food industry. Consequently all specific impacts of the entire production chain of sugar from beet are covered by this module as there are global trade, EU Reform of the Sugar Market Regime, systems for quota and paying, plant breeding, soil cultivation, growing impacts from sowing to harvest including all technical and cultivation aspects, crop yield, extension services, weed control, pathogen and pest management, as well as definition and analysis of the technical quality, processing technology of sugar beets, logistics of harvest and transportation, sugar as food and its marketing. The module consists of lectures by invited speakers and lecturers of the Institute of Sugar Beet Research, study and field trips.	
Examination: Oral examination (approx. 30 minutes) Examination requirements: M.Sc. after the 2nd semester or junior employees of supply chain. Knowledge of the sugar value chain and understanding of different influences to the system on the basis of the latest scientific insights.	6 C
Admission requirements: none	Recommended previous knowledge: none
Language: English	Person responsible for module: apl. Prof. Anne-Katrin Mahlein
Course frequency: each summer semester	Duration: 1 Week
Number of repeat examinations permitted:	Recommended semester:

twice	
Maximum number of students: 25	

Georg-August-Universität Göttingen		6 C
Module M.Agr.0009: Biological control and biodiversity		6 WLH
Learning outcome, core skills: Gain an understanding of what biological control is and how it can be used effectively as part of an IPM system and how biodiversity contributes to control of pest populations and other ecosystem services.		Workload: Attendance time: 84 h Self-study time: 96 h
Course: Biological Control and Biodiversity (Lecture, Exercise, Seminar) <i>Contents:</i> <ul style="list-style-type: none"> • Theoretical foundations of biological control • Natural enemy behaviour and biological control success • Biodiversity and ecosystem services in agroecosystems • Practical examples of biological control projects • Plant-herbivore-predator-interactions Principles of population dynamics • Biological weed control 		6 WLH
Examination: Written exam (70%; 45 minutes) and presentation (30%; approx. 20 minutes) Examination prerequisites: regular attendance at seminar and exercise and presentation of a seminar talk Examination requirements: Basic knowledge of the mechanisms of biological control of herbivorous insects; methodological approaches based on case examples; role of biodiversity for ecosystem processes and the population dynamic of herbivorous insects, multitrophic interactions between plants, herbivorous insects and their natural enemies; biodiversity and services of ecosystems.		6 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: Prof. Dr. Stefan Vidal	
Course frequency: each winter semester; Göttingen	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester:	
Maximum number of students: 12		
Additional notes and regulations: Lecture based materials; details provided during lectures.		

Georg-August-Universität Göttingen Modul M.Agr.0010: Biotechnological Applications in Plant Breeding <i>English title: Biotechnological applications in plant breeding</i>		6 C 4 SWS
Lernziele/Kompetenzen: Students acquire theoretical and practical knowledge about fundamental plant biotechnological methods and their applications to contribute to solving actual problems in breeding of different crop species. Students learn to critically interpret scientific papers dealing with new biotechnological methods and applications.		Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltung: Biotechnological Applications in Plant Breeding (Blockveranstaltung, Praktikum, Vorlesung, Seminar) <i>Inhalte:</i> Basics and principles of plant biotechnology and molecular genetics are examined and explained in lectures. Biotechnological applications in plant breeding and agriculture are presented and discussed in accompanying seminars given by the students. Topics covered include in vitro-techniques for the mass-propagation of plants, direct and indirect gene transfer in plants, biochemical and molecular characterization of transgenic plants, safety aspects of gene technological applications, haploid production and utilization in plant breeding, sexual and somatic interspecific hybridization, classical mutagenesis (TILLING), site directed mutagenesis, Polymerase chain reaction (PCR), molecular marker types (RAPD, RFLP, AFLP, SSR, SNP) and their genetic characteristics and applications in Plant Breeding. Experiments and Demonstrations underlining the theory will be performed in the greenhouse and in the laboratory.		4 SWS
Prüfung: Klausur (90 Minuten) Prüfungsanforderungen: Profound and complex theoretical knowledge about fundamental methods and their applications in plant breeding.		6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache: Englisch	Modulverantwortliche[r]: Dr. Christian Möllers	
Angebotshäufigkeit: jedes Wintersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	
Maximale Studierendenzahl: 12		

Georg-August-Universität Göttingen Modul M.Agr.0023: Interactions between plants and pathogens <i>English title: Interactions between Plants and Pathogens</i>		6 C 4 SWS
Lernziele/Kompetenzen: Understanding interactions between plants and pathogens from general concepts to selected examples on phenomenological, morphological, physiological and molecular levels. Critical appraisal of technical approaches, supported by own practical experiences from the laboratory.		Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltung: Interaktionen zwischen Pflanzen und phytopathogenen Organismen sowie Viren (Praktikum, Vorlesung) <i>Inhalte:</i> The course deals with interactions between host plants on one side and plant-pathogenic fungi, bacteria and viruses on the other side. The following topics are covered: Categorization of inter-specific interactions among organisms; general concepts of pathogenicity, virulence and avirulence including gene-for-gene hypothesis and its experimental proof. Example of known resistance genes. Resistance factors (preformed and induced); counteracting mechanisms including detoxification. Induced local and systemic resistance. Infection of plants by <i>Agrobacterium tumefaciens</i> and inter-kingdom gene transfer. Disease cycle of plant pathogenic fungi including host recognition, spore germination, penetration of plant surface, colonization of plant tissue, acquisition of nutrient, building biomass and dissemination of the pathogen. In the practical part of the course, participants will extract phytoalexins from oilseed rape plants and learn chromatographic techniques for their detection and test their biological activity (HPLC-UV and TLC with bioautography detection).		4 SWS
Prüfung: Klausur (90 Minuten) Prüfungsvorleistungen: Teilnahme am praktischen Teil des Moduls im Anschluss an die Vorlesung und Anfertigung eines von den Prüfenden inhaltlich akzeptierten Protokoll Prüfungsanforderungen: Understanding theoretical concepts treated in the lecture; knowledge of specific examples of pathosystems illustrating these concepts.		6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache: Englisch	Modulverantwortliche[r]: Dr. Birger Koopmann	
Angebotshäufigkeit: jedes Wintersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	
Maximale Studierendenzahl: 36		

Georg-August-Universität Göttingen Modul M.Agr.0039: Molecular Techniques in Phytopathology <i>English title: Molecular Techniques in Phytopathology</i>		6 C 4 SWS
Lernziele/Kompetenzen: Technical skills in nucleic acid analysis techniques; ability to select adequate methods for a research project. Presentation and interpretation of the results.		Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltung: Molecular Techniques in Phytopathology (Praktikum, Vorlesung) <i>Inhalte:</i> With the help of laboratory experiments, basic molecular techniques will be taught, including the isolation of plasmids and total DNA as well as DNA fragments from electrophoretic agarose gels, cloning of PCR products (enzymatic modification, ligation), transformation and in vivo amplification of plasmids, DNA blotting, labeling of DNA probes for hybridization with nonradioactive labels (DIG-dUTP), Southern hybridization and detection of hybridized probes by chemiluminescence, ITS-RFLP-analysis of pathogens of oilseed rape, real-time PCR for mycotoxin-producing pathogens of cereals. In accompanying lectures, aspects of nucleic acid and protein chemistry relevant for analytical techniques will be explained. Technical solutions for specific scientific questions will be presented and discussed.		4 SWS
Prüfung: Mündlich (ca. 30 Minuten) Prüfungsvorleistungen: Anfertigung eines für den Prüfenden akzeptierten Praktikumsprotokolles Prüfungsanforderungen: Basic knowledge of the structure and properties of nucleic acids, properties and applications of enzymes used in the analysis and manipulation of DNA, understanding of standard techniques (Southern blotting, electrophoresis, DNA sequencing), data analysis, criteria for the selection of a DNA analytical technique for a specific task.		6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache: Englisch	Modulverantwortliche[r]: Dr. Birger Koopmann	
Angebotshäufigkeit: jedes Sommersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	
Maximale Studierendenzahl: 16		

Georg-August-Universität Göttingen Modul M.Agr.0045: Mycology <i>English title: Mycology</i>		6 C 4 SWS
Lernziele/Kompetenzen: <ul style="list-style-type: none"> • Learning methodology for handling of filamentous fungal organisms <i>in vitro</i> • Gaining knowledge on the phytopathogenic, mutualistic and ecological roles of filamentous fungi • Acquiring skills in the experimentation with phytopathogenic fungi on plants • Training in the taxonomic determination of fungal organisms 		Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltung: Mycology (Praktikum, Vorlesung) <i>Inhalte:</i> <ul style="list-style-type: none"> • Overview on the ecology and taxonomy of phytopathogenic fungi • Exercises for the taxonomic determination of fungi based on morphology and molecular genetic analysis • Isolating of fungi from diverse habitats (soil, water, plants) • Inoculation of plants with phytopathogenic fungi and determination of disease severity • Determination of soil fungistasis • Race determination in powdery mildew • Assessment of fungicide resistance in fungi • in situ studies of infection by biotrophic and necrotrophic pathogens 		4 SWS
Prüfung: Mündlich (ca. 20 Minuten) Prüfungsvorleistungen: Gruppenprotokoll und Ergebnispräsentation Prüfungsanforderungen: Basic knowledge on the biology (life cycles, epidemiology) and ecology of filamentous fungi; specific knowledge on the gaining of fungal isolates from diverse habitats, their handling in the lab and their utilization in phytopathological experiments; basic steps in the taxonomic determination of fungi (conidiogenesis types); methods in fungal phytopathology; fungal diseases of crops (general knowledge)		6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Microbiology, plant pathology, crop protection	
Sprache: Englisch	Modulverantwortliche[r]: Prof. Dr. Andreas von Tiedemann	
Angebotshäufigkeit: jedes Wintersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: Master: 1	
Maximale Studierendenzahl: 12		

Georg-August-Universität Göttingen Modul M.Agr.0056: Plant breeding methodology and genetic resources <i>English title: Plant breeding methodology and genetic resources</i>		6 C 4 SWS
Lernziele/Kompetenzen: Students learn the integration of classical and molecular approaches to solve present problems in plant breeding. Social aspects have to be considered. Students learn, in own presentations, to draw critical conclusions from recent research papers and to communicate these to other students.		Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltung: Plant breeding methodology and genetic resources (Vorlesung) <i>Inhalte:</i> Principles of breeding methodology: Response to selection, breeding methods for clonal, line, hybrid and population cultivars. Marker assisted selection for monogenic and polygenic traits. Use of plant genetic resources: wild species, ex-situ and in-situ conservation, on-farm management. Breeding for marginal environments, demonstrated with examples from temperate and tropical regions.		4 SWS
Prüfung: Klausur (Gewicht: 80%, Dauer: 90 Minuten) und Präsentation, Referat oder Korreferat (Gewicht: 20%, Dauer: ca. 20 Minuten) Prüfungsanforderungen: Population Genetics, Application of Markers in Plant Breeding, Concepts of using genetic resources in plant breeding. Good knowledge on: 'Pre-Breeding', categories and methods in Plant Breeding.		6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Basic knowledge (B.Sc. level) in genetics and plant breeding	
Sprache: Deutsch, Englisch	Modulverantwortliche[r]: apl. Prof. Dr. Wolfgang Link	
Angebotshäufigkeit: jedes Sommersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	
Maximale Studierendenzahl: 25		
Bemerkungen: Literature: Lecture based material.		

Georg-August-Universität Göttingen		6 C
Module M.Agr.0057: Plant Virology		6 WLH
Learning outcome, core skills: Knowledge in classical and molecular Plant Virology, Learning of practical plant virus detection methods with electron-optical methods, immunological methods. Deduction of scientific questions and hypotheses and critical review of methods applied based on personal lab experience		Workload: Attendance time: 80 h Self-study time: 100 h
Course: Plant Virology (Internship, Lecture) <i>Contents:</i> Lecture: systematics, vectors, modes of transmission, genome organisation, gene expression strategies, control strategies Practical course: learning of diagnostic methods, symptom recognition, immunological and molecular detection methods		6 WLH
Examination: Written exam (45 minutes, weighing 50%) and homework (max. 20 pages, weighing 50%) Examination prerequisites: Participation at the practical course following the lecture Examination requirements: Understanding of the imparted detection methods and knowledge about virus biology		6 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: Prof. Dr. Mark Varrelmann	
Course frequency: each winter semester	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester:	
Maximum number of students: 16		

Georg-August-Universität Göttingen Modul M.Agr.0058: Plant herbivore interactions <i>English title: Plant herbivore interactions</i>		6 C 4 SWS
Lernziele/Kompetenzen: Knowledge of complex interactions between plants and herbivorous insects. Preparation and critical reflection of methods applied in current research findings covering the lecture topics by a seminar presentation.		Arbeitsaufwand: Präsenzzeit: 60 Stunden Selbststudium: 120 Stunden
Lehrveranstaltung: Plant herbivore interactions (Vorlesung, Seminar) <i>Inhalte:</i> The modul deals with the interactions between plants and herbivorous insects. The diversity of the organisms involved and the biocenoses are discussed. With regard to plants different adaptations to damage by insects are presented and the role of resistance mechanisms is outlined. The sensory organs of herbivorous insects to discriminate between different plant species and the role of volatile and secondary compounds produced by the plants are demonstrated. Multiple Interactions between plants, their herbivores, and natural enemies and application strategies in plant protection are discussed. The interactions between flowering plants and pollinators are outlined and the importance of seed predation will be exemplified. During the seminar part of the module students will present recent research findings which will complement the content of the lectures.		4 SWS
Prüfung: Klausur (Gewicht: 67%, Dauer: 45 Minuten) und Präsentation, Referat oder Korreferat (Gewicht: 33%, Dauer: ca. 20 Minuten) Prüfungsvorleistungen: Teilnahme an den Seminaren und Bearbeitung und Vorstellung eines Seminarbeitrages Prüfungsanforderungen: Profound knowledge of processes involved in plant selection by herbivorous insects; protection strategies evolved by plants; determinants of herbivorous communities on specific plants, multitrophic interactions between plants; herbivorous insects and their natural enemies; interactions between plants and their pollinators or seed predators.		6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache: Englisch	Modulverantwortliche[r]: Prof. Dr. Michael Georg Rostás	
Angebotshäufigkeit: jedes Wintersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	
Maximale Studierendenzahl: 20		

Georg-August-Universität Göttingen Modul M.Agr.0094: Basics of Molecular Biology in Crop Protection <i>English title: Basics of molecular biology in crop protection</i>		6 C 4 SWS
Lernziele/Kompetenzen: Comprehension about important scientific plant pathogen detection methods like ELISA and PCR used in agriculture, knowledge about biochemical and molecular basics in plant breeding and genetic resistance against plant pathogens.		Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltung: Basics of molecular biology in crop protection (Vorlesung) <i>Inhalte:</i> In agricultural research and diagnostics there is an increasing use of biochemical and molecular methods and techniques. The lecture conveys the scientific basics that are required for the understanding of these methods and prepares students for further practical courses and lectures. Specific contents are: cytology, cell-wall composition of different organisms, structure and function of different macromolecules (proteins, DNA, carbohydrates), function and regulation of enzymes, DNA-replication, transcription and translation, mechanisms of regulation, introduction into principles of molecular detection methods, lipids and membranes, phytohormones and selected secondary metabolites.		4 SWS
Prüfung: Klausur (90 Minuten) Prüfungsvorleistungen: Präsentation (ca. 10 Min.) Prüfungsanforderungen: Composition of macromolecules, output materials, typical molecular binding types, function, regulatory mechanisms on protein and nucleic acid level, phytohormones, secondary metabolism.		6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache: Englisch	Modulverantwortliche[r]: Prof. Dr. Mark Varrelmann	
Angebotshäufigkeit: jedes Sommersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	
Maximale Studierendenzahl: 20		

Georg-August-Universität Göttingen Modul M.Agr.0146: Nematology <i>English title: Nematology</i>		3 C 4 SWS
Lernziele/Kompetenzen: Basic knowledge of the nematode bauplan, their role as pests; basic methods with regard to the quantification and control of nematodes, importance and application of nematodes in biological control programs; their role in regulation processes in ecosystems. Seminar talk on a specific scientific problem related to nematodes.	Arbeitsaufwand: Präsenzzeit: 60 Stunden Selbststudium: 30 Stunden	
Lehrveranstaltung: Nematology (Praktikum, Seminar) <i>Inhalte:</i> The module deals with the biology of nematodes and their importance in plant protection. The most important taxa of nematodes are presented by preparations and living organisms; the most important morphological characters will be identified. Interactions between plant parasitic nematodes and their hos plants will be discussed. The role of nematodes in inundative biological control measures will be discussed as well. During the course students will become familiar with des different nematode species and will learn basic principles of their determination. Phytoparasitic nematodes will be prepared. A practical experiment will demonstrate toxicity of different compounds.		4 SWS
Prüfung: Hausarbeit (max. 30 Seiten) Prüfungsvorleistungen: Teilnahme am Praktikum und Bearbeitung und Vorstellung eines Seminarbeitrages Prüfungsanforderungen: Basic knowledge in morphological characters of nematodes; ability to discriminate between different feeding types of nematodes; role and function of biological control using nematodes; importance of nematodes for biodiversity; in some circumstances preparation of homework.		3 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache: Englisch	Modulverantwortliche[r]: Prof. Dr. Stefan Vidal	
Angebotshäufigkeit: jedes Wintersemester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	
Maximale Studierendenzahl: 12		

Georg-August-Universität Göttingen Modul M.Cp.0002: Internship <i>English title: Internship</i>		9 C 6 SWS
Lernziele/Kompetenzen: Specific knowledge of the respective area of work/research will be acquired, social abilities and competences like work organization, teamwork, interdisciplinary work, flexibility will be acquired.		Arbeitsaufwand: Präsenzzeit: 240 Stunden Selbststudium: 30 Stunden
Lehrveranstaltung: Internship (Praktikum) <i>Inhalte:</i> Students will carry out a practical project in different areas of crop protection, in agrochemical companies, in research or consulting institutions and experience the daily work situation. They will work on other projects and experience the daily working routine outside the university. Duration minimum 6 weeks.		6 SWS
Prüfung: Seminararbeit (max. 20 Seiten, Gewichtung: 50%) und Präsentation, Referat oder Korreferat (ca. 20 Minuten, Gewichtung: 50%) Prüfungsanforderungen: Practical work in a scientific project in different areas of crop protection, written internship report and seminar presentation.		9 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache: Englisch	Modulverantwortliche[r]: Prof. Dr. Andreas von Tiedemann	
Angebotshäufigkeit: jedes Semester	Dauer: 1 Semester	
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester: Master: 3	
Maximale Studierendenzahl: 20

Georg-August-Universität Göttingen Modul M.Cp.0005: Integrated Management of Pests and Diseases <i>English title: Integrated management of pests and diseases</i>		6 C 4 SWS
Lernziele/Kompetenzen: Students will be able to understand and develop plant protection strategies to control plant pathogens and insect pests while observing the sustainability of the whole crop production system.		Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltung: Integrated Management of Pests and Diseases (Vorlesung) <i>Inhalte:</i> The integrated pest management concept and its main components are presented with regard to the management of fungal plant pathogens and insect pests in temperate zones: preventive methods, selective use pesticides, effect of cultural methods (sowing date, soil preparation, fertilization, crop rotation, varieties) on occurrence, distribution and damage of plant pathogens and insect pests. The diagnostics and quantification of damage symptoms; prognosis systems are discussed.		4 SWS
Prüfung: Mündlich (ca. 20 Minuten) Prüfungsanforderungen: Knowledge of the relationship between crop production methods and the occurrence of plant diseases and insect pests in temperate zones, concept of integrated pest management.		6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache: Englisch	Modulverantwortliche[r]: Prof. Dr. Andreas von Tiedemann

Georg-August-Universität Göttingen Modul M.Cp.0008: Fungal Toxins <i>English title: Fungal toxins</i>		6 C 4 SWS
Lernziele/Kompetenzen: Students will realize the importance of secondary metabolites produced by fungi in plant production. They will be able to compare and rate the significance of natural toxins and anthropogenic substances and to classify different food contaminations according to their toxicology In the laboratory students will acquire practical knowledge of chemical- analytical methods, so they will be able to select the optimum analytical method.		Arbeitsaufwand: Präsenzzeit: 56 Stunden Selbststudium: 124 Stunden
Lehrveranstaltung: Fungal Toxins (Vorlesung, Laborpraktikum) <i>Inhalte:</i> The most important mycotoxins will be presented and described, concepts to determine the toxicity and procedures to develop legal maximum values will be discussed, and the risk for consumers and animals will be judged. The ecological importance of mycotoxins will be discussed, methods of mycotoxin identification will be explained and methods to reduce the mycotoxin contents of plant products will be presented. Selected phytoalexins and phytohormones playing a role as a factor of virulence or pathogenicity in plant diseases will be introduced. In the practical students will process plant material and use different methods for analysis of mycotoxins.		4 SWS
Prüfung: Klausur (60 Minuten) Prüfungsvorleistungen: Voraussetzung ist angenommenes Protokoll vom Praktikum Prüfungsanforderungen: Knowledge of the most important mycotoxins occurring in crop plants, methods to analyse their toxicity, development of legal limit values; ecological importance of mycotoxins; methods to determine mycotoxins, factors responsible for mycotoxin content in plant products, the importance of phytotoxins and phytohormones as factors of virulence and pathogenicity.		6 C

Georg-August-Universität Göttingen Modul M.Cp.0012: Weed Biology and Weed Management <i>English title: Weed biology and weed management</i>		6 C 4 SWS
Lernziele/Kompetenzen: Students will understand the biology of local and worldwide important weeds, their taxonomy, life-form and habitat requirement, as well as their evolution, distribution, plant sociology, ecology, population dynamics and genetics. Endangered as well as invasive species, the interaction of weeds and crops (allelopathy and competition), weed control with direct (chemical and mechanical), and indirect (agronomic) measures will be taught.		Arbeitsaufwand: Präsenzzeit: 60 Stunden Selbststudium: 120 Stunden
Lehrveranstaltung: Weed Biology and Weed Management (Vorlesung) <i>Inhalte:</i> In the lecture the three main topics in Weed Science, the biology of weeds, the interaction of weeds and crops, and the weed management with direct (chemical and mechanical) and indirect (agronomic) measures will be presented. The benefits and harms of weeds for the ecology, society and the economy will be discussed. The need for species conservation vs. weed control is discussed in the context of the efficacy of weed control measures. Project work: Students will work on a project in teams. They will cultivate weeds and crops in the greenhouse and investigate the weed crop interaction in competition experiments.		4 SWS
Prüfung: Klausur (90 Minuten) Prüfungsanforderungen: Basic knowledge of weed characteristics, biology and ecology. Knowledge of the main weed control techniques, mode of action and examples. Knowledge of the main weeds worldwide and ways of management. Ability to associate weed populations with present crop production systems and develop control strategies.		6 C
Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: keine	
Sprache: Englisch	Modulverantwortliche[r]: Dr. Jean Wagner

Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:	
Maximale Studierendenzahl: 25		

Georg-August-Universität Göttingen		6 C
Module M.Cp.0015: Molecular Weed science		4 WLH
Learning outcome, core skills: Understanding the basic principles of the interactions between herbicides and the target plant and herbicide selectivity. Resistance mechanisms in weeds and mechanisms of tolerance in cultivated plants are understood, can be distinguished and practical consequences be drawn. Students have a fundamental understanding of the development and distribution of herbicide resistance in weeds.		Workload: Attendance time: 60 h Self-study time: 120 h
Course: Molecular Weed Science (Lecture, Practical course) <i>Contents:</i> Lecture: In the lecture the application of molecular methods in weed science and weed management is presented, focusing on the naturally occurring herbicide resistance in weeds. The genetic basis will be taught with regard to transgenic and non transgenic herbicide tolerance in cultivated plants. The possibilities of the use of molecular techniques for the detection of herbicide resistance in weeds will be discussed. New findings by the so called –omics (genomics, proteomics and metabolomics) on the interaction of weeds with their environment are of importance in the development of new herbicides and will be discussed as well as alternative transgenic approaches in weed management. Practical: A one week practical will be held after the lecture. In the practical actual resistance problems in weeds are presented. Resistance detection methods will be presented and carried out on the protein level (target assay) and on the genetic level (SNP-analysis') and the possible use for a sustainable herbicide weed management will be discussed.		4 WLH
Examination: Written examination (90 minutes) Examination prerequisites: Regular participation in the laboratory practical Examination requirements: Knowledge of the interaction between herbicide and target, the selectivity of herbicides, mechanisms of resistance in weeds, mechanisms of development of tolerance in cultivated plants. Basic knowledge of development and distribution of herbicide resistance in weeds		6 C
Admission requirements: none	Recommended previous knowledge: none

Georg-August-Universität Göttingen		6 C 4 WLH
Module M.Cp.0016: Practical statistics and experimental design in agriculture		
Learning outcome, core skills: The aim of the course is to familiarize students with the basic concepts of statistics and their application in agricultural science. The second goal is to learn the use of software packages like SAS.		Workload: Attendance time: 56 h Self-study time: 124 h
Course: Practical Statistics and Experimental Design in Agriculture (Lecture, Exercise) <i>Contents:</i> In the beginning of the course, students are introduced to the basic concepts of statistics like frequency distributions, the normal distribution and hypothesis testing. They are also introduced to software packages like SAS, that are used for the practical exercises. Regression and correlation analysis are then introduced. Different experimental designs like randomized block, latin square, and split plot are described and analyzed by one-way analysis of variance or as factorial experiments. Generalized Linear Models will be used and multivariate data will be analyzed by cluster and principal component methods. A large amount of examples and exercises constitute an important aspect of the course, enabling the students to understand and assimilate the theoretical content. Practical analyses of example data sets also provide the students with the required experience and skills for future statistical tasks in the context of Mastertheses.		4 WLH
Examination: Written examination (90 minutes) Examination requirements: Knowledge of the basic concepts of statistics and their application in agricultural science and in the use of software packages like SAS.		6 C
Admission requirements: none	Recommended previous knowledge: Mathematics, statistics	
Language: English	Person responsible for module: Dr. Christian Kluth	
Course frequency: each summer semester	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: Master: 2

Maximale Studierendenzahl: 20		

Georg-August-Universität Göttingen Module M.Cp.0020: Ecotoxicological Risk Assessment for Plant Protection Products	3 C 2 WLH
Learning outcome, core skills: To gain a basic knowledge of ecotoxicology and understanding its principles and associated testing and ecological risk assessment methods, specifically for application to plant protection products.	Workload: Attendance time: 28 h Self-study time: 62 h
Course: Ecotoxicological Risk Assessment for Plant Protection Products (Lecture, Exercise) <i>Contents:</i> In this module, students will be lectured on the basics of risk assessment for plant protection products. The most important aspects and definitions in the field of exposure, selection of representative test species, (statistical) data evaluation and risk assessment will be discussed. The for registration purposes considered organism groups, i.e. birds, mammals, aquatic organisms (incl. fish, invertebrates, primary producers), honeybees, soil organisms (incl. earthworms), non-target arthropods and non-target plants, and the corresponding data requirements will be reviewed. Specific aspects of exposure and assessment of each of these organism groups will be discussed. Furthermore, the importance of ecotoxicology in the registration process of a plant protection product will be discussed. The theoretical basis will be handled in the lectures and subsequently some aspects will then be applied in the practical part. This includes: <ul style="list-style-type: none"> • Methods in ecotoxicology (e.g. standardisation and quality of testing) • Exposure pathways, bioavailability • Selection of test species and testing methods • Risk assessment and risk management In the practical part, students will learn to design, conduct and evaluate acute toxicity tests with plant protection products in the laboratory. It is planned to use test species from the group of arthropods, mainly insect larvae (depending on animal availability). The aim of the tests is to obtain a dose-response relationship and (mathematically) derive EC50 or LC50 values and also, if the data permit, to (statistically) derive NOEC and LOEC values. Finally, a choice of publically available European registration dossiers will be reviewed and critically discussed.	2 WLH
Examination: Written examination (60 minutes) Examination requirements: Knowledge of ecotoxicological testing methods and their evaluation for the risk assessment of plant protection products.	3 C
Admission requirements: Plant Health/Crop Protection	Recommended previous knowledge: none

Language: English	Person responsible for module: Prof. Dr. Lennart Weltje
Course frequency: each winter semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester:
Maximum number of students: 15	

Georg-August-Universität Göttingen		6 C
Module M.Cp.0021: Plant Health Internship		
Learning outcome, core skills: Specific knowledge of the respective area of work/research will be acquired, social abilities like work organization, teamwork, interdisciplinary work, flexibility will be practiced		Workload: Attendance time: 20 h Self-study time: 160 h
Course: Plant Health Internship <i>Contents:</i> Students will carry out practical work in areas of crop protection, in agrochemical companies, in research or consulting institutions and experience the daily work situation Duration: approx. 4 weeks		4 WLH
Examination: Term Paper (max. 20 pages) Examination requirements: Practical work in a scientific project in different areas of crop protection, written internship report showing that students gathered knowledge of their research topic, its relevance, are able to evaluate data, explain and interpret them in a written document.		6 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: Prof. Dr. Andreas von Tiedemann	
Course frequency: each summer semester	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester:	
Maximum number of students: 8		

Georg-August-Universität Göttingen Universität Kassel/Witzenhausen Module M.SIA.E13M: Microeconomic theory and quantitative methods of agricultural production		6 C 4 WLH
Learning outcome, core skills: Microeconomic Theory of Agricultural Production Students are familiar with microeconomic approaches and can apply them to analyze issues related to agriculture and rural development. Quantitative Methods in Agricultural Business Economics Students are familiar with quantitative methods used for the analysis and planning of farms and enterprises in the agricultural sector.		Workload: Attendance time: 56 h Self-study time: 124 h
Course: Microeconomic theory of agricultural production (Lecture) <i>Contents:</i> Consumer theory, producer theory, markets, monopoly situations, risk and uncertainty, economics of technical change, farm household models, sharecropping contracts.		2 WLH
Course: Quantitative methods in agricultural business economics (Lecture) <i>Contents:</i> Budgeting, accounting, annual balance sheets, linear programming, finance, investment analysis		2 WLH
Examination: Written examination (120 minutes) Examination requirements: Consumer theory; producer theory; risk; technological progress; farm household models; budgeting and accounting; linear programming; finance; investment analysis		6 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: Prof. Dr. Matin Qaim	
Course frequency: each winter semester; Göttingen	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester:	
Maximum number of students: 40		
Additional notes and regulations: Literature: Text books, research articles and lecture notes. After successful conclusion of M.Agr.0060 students can not complete M.SIA.E13M		

Georg-August-Universität Göttingen Universität Kassel/Witzenhausen Modul M.SIA.P07: Soil and plant science <i>English title: Soil and plant science</i>		6 C 4 SWS
Lernziele/Kompetenzen: Bridging module for students lacking basic knowledge in some agronomy disciplines. With the help of lectures and reading materials students will be enabled to fill in gaps and get updated on state-of-the art knowledge with a special focus on questions pertinent to organic agriculture. Students, having taken this module, will be able to follow advanced courses in the above fields.		Arbeitsaufwand: Präsenzzeit: 60 Stunden Selbststudium: 120 Stunden
Lehrveranstaltung: Soil and plant science (Vorlesung, Seminar) <i>Inhalte:</i> Influence of soil formation processes on physical properties (texture, soil water, pore space), chemical properties (buffering, exchange capacity, nutrients), and biological properties (organic matter, edaphon), soil formation and classification. Nutrient availability and and nutrient mobilization under conventional and organic agricultural conditions. Major and minor nutrients and food quality. Plant breeding goals for different agricultural systems. Plant morphology, genetics and breeding: principles of plant domestication and use, characterization and evaluation, use of genetic resources in plant breeding, genetic basis for plant breeding Genetics of host-parasite interactions, epidemiology and plant defence. Insect physiology and ecology. Spezifische allgemeine und wissenschaftliche Artikel, die sich mit dem Zielland der Exkursion befassen werden über eine E-Learning Plattform zur Verfügung gestellt		4 SWS
Prüfung: Klausur (120 Minuten) oder Fachgespräch (ca. 20 Minuten) Prüfungsanforderungen: Fundamentals of soil science: Physical properties (texture, soil water, pore space), chemical properties (buffering, exchange capacity, nutrients), biological properties (organic matter, edaphon), soil formation and classification. Plant nutrition: Role of major and minor elements in plants, nutrient availability and nutrient mobilisation, plant nutrients and food quality Plant breeding and genetics: plant morphology, genetics and breeding: principles of plant domestication and use, characterization and evaluation, use of genetic resources in plant breeding, genetic basis for plant breeding. Plant protection: principles of plant pathology and entomology, genetics of plant diseases, epidemiology, plant defence mechanisms; insect physiology and ecology		6 C

Georg-August-Universität Göttingen Universität Kassel/Witzenhausen Module M.SIA.P08: Pests and diseases of tropical crops		6 C 6 WLH
Learning outcome, core skills: Students should become familiar with the causes of diseases (abiotic & biotic diseases), with the taxonomy of disease agents (bacteria, fungi, virus) and insect pests, with basics of integrated pest management (approaches, economic threshold, epidemiology), and biological, cultural control (cultivars, crop rotation, planting term, manual control), and chemical control options (toxicology, fungicides, insecticides) of the main crops in subtropical and tropical regions		Workload: Attendance time: 84 h Self-study time: 96 h
Course: Pests and diseases of tropical crops (Lecture, Seminar) <i>Contents:</i> Pests and diseases of selected crops are treated together for each crop including approaches to integrated control. The following crops will be presented: rice, maize, cotton, cocoa, coffee, cassava, phaseolus beans, bananas, and others. For each crop, a short introduction to botanical and agronomic features (as far as they concern disease or pest control) is given, together with an overview of the main diseases world-wide. The economic importance of diseases and pests in different geographical areas is discussed. The most important diseases and pests of die crop are treated in detail and die possibilities for integrated control are discussed. Short introductions (reviews) on basic subjects of plant protection are given, these include: causes of diseases (abiotic & biotic diseases), taxonomy of disease agents (bacteria, fungi, viruses) and insect pests, integrated pest management (approaches, economic threshold), biological control (diseases, pests), cultural control (varieties, crop rotation, planting term, manual control), and chemical control (toxicology, fungicides, insecticides). Students will give seminars on related topics. Vorlesungsbasierte Literatur		6 WLH
Examination: Written exam (60 minutes, 67%) and presentation (ca. 20 minutes, 33%) Examination prerequisites: Seminar speech Examination requirements: Knowledge on the most important pests and diseases of tropical and subtropical crops; chemical and biological control options, phytosanitary approaches, and sustainable cropping systems for tropical crops.		6 C
Admission requirements: none	Recommended previous knowledge: Basic knowledge (B.Sc. level) in agricultural entomology, plant diseases and plant production

each summer semester; Göttingen	1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester:
Maximum number of students: 30	
Additional notes and regulations: Literature: Lecture based materials; details provided during lectures.	

Georg-August-Universität Göttingen Universität Kassel/Witzenhausen Modul M.SIA.P15M: Methods and advances in plant protection <i>English title: Methods and advances in plant protection</i>	6 C 4 SWS
Lernziele/Kompetenzen: Students are able to critically evaluate published results and apply this knowledge to actual problems in the field. They are also able to deal with problems in the field: Identification and measurements, design of experimental and analytical approaches to problems.	Arbeitsaufwand: Präsenzzeit: 60 Stunden Selbststudium: 120 Stunden
Lehrveranstaltung: Methods and advances in plant protection (Vorlesung, Exkursion, Übung) <i>Inhalte:</i> Advanced course in plant pathology and entomology. Methodology and evaluation methods in plant protection. Case studies of specific plant protection issues in organic farming in the form of lectures, seminars and practical courses.	4 SWS
Prüfung: Klausur (120 Minuten) oder Fachgespräch (ca. 20 Minuten) (Gewichtung: 70%) und Protokoll (max. 3 Seiten) oder Referat (ca. 10 Minuten) (Gewichtung: 30%) Prüfungsanforderungen: Advanced knowledge in plant protection (Entomology and Pathology) Methodology and evaluation methods in plant protection based on case studies.	6 C
Zugangsvoraussetzungen: Introductory course in plant protection (entomology and pathology, at least 6 ECTS or equivalent) or bridging module M.SIA.P07 Soil and Plant Science	Empfohlene Vorkenntnisse: keine
Sprache: Englisch	Modulverantwortliche[r]: Prof. Dr. Maria Renate Finckh
Angebotshäufigkeit: jedes Wintersemester; Witzenhausen	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:
Maximale Studierendenzahl: nicht begrenzt	
Bemerkungen: Literature: Agrios, G.N. 2005: Plant Pathology, 5th edition Academic Press, New York; Pedigo, L.P. 2002: Entomology and Pest Management, 4th edition, Macmillan Pub Co.	

Georg-August-Universität Göttingen Universität Kassel/Witzenhausen Modul M.SIA.P22: Management of tropical plant production systems <i>English title: Management of tropical plant production systems</i>	6 C 4 SWS
---	--------------

Lernziele/Kompetenzen: Knowledge of botanical, ecological and agronomic facts of presented crops and cropping systems. The students should be able to classify crops and cropping systems in relation to site conditions and undertake system-orientated evaluation of sustainable production.	Arbeitsaufwand: Präsenzzeit: 60 Stunden Selbststudium: 120 Stunden
---	---

Lehrveranstaltung: Management of tropical plant production systems (Vorlesung) <i>Inhalte:</i> Presentation of the most important crops with respect to: botany, morphology, origin, climatic and ecological requirements, crop production, harvest procedure, significance in local farming systems, utilisation as food, feed, raw materials and as bioenergy source. Discussion of specific cropping systems in the tropics and subtropics and specific management systems for the sustainable improvement of productivity. Literatur Rehm, S., Espig, G. 1991: The Cultivated Plants of the Tropics and Subtropics. Verlag Josef Margraf. Weikersheim, Germany; lecture notes	4 SWS
---	-------

Prüfung: Written exam (90 minutes) or oral exam (ca. 30 minutes) Prüfungsanforderungen: Knowledge of botanical, ecological and agronomic facts of the presented crops and cropping systems. Knowledge of the assignment of crops and cropping systems to different site conditions, as well as system-oriented evaluation of sustainable production at selected sites.	6 C
--	-----

Zugangsvoraussetzungen: keine	Empfohlene Vorkenntnisse: Basic knowledge on plant production (BSc-level)
Sprache: Englisch	Modulverantwortliche[r]: Prof. Dr. Reimund P. Rötter
Angebotshäufigkeit: jedes Wintersemester; Göttingen	Dauer: 1 Semester
Wiederholbarkeit: zweimalig	Empfohlenes Fachsemester:
Maximale Studierendenzahl: 30	

Bemerkungen: exam on the first examination, oral exam on the second examination Literature:

Rehm, S., Espig, G. 1991: The Cultivated Plants of the Tropics and Subtropics. Verlag Josef Margraf.
Weikersheim, Germany; lecture notes

Georg-August-Universität Göttingen Module M.WIWI-QMW.0004: Econometrics I	6 C 6 WLH
Learning outcome, core skills: This lecture provides a detailed introduction and discussion to the theory of several topics of econometrics. In a practical course the students will apply the methods discussed to real economic data and problems using the statistical software packages Eviews and R.	Workload: Attendance time: 56 h Self-study time: 124 h
Course: Econometrics I (Lecture) <i>Contents:</i> Multiple linear regression model: Estimation, Inference and Asymptotics. Maximum likelihood modeling. Generalized least squares. Stochastic regressors. Instrumental variable estimators. Generalized method of moments, likelihood based inference. Dynamic models, weak exogeneity, cointegration, stochastic integration. Literature: Wooldridge, Jeffrey M. 2006. <i>Introductory econometrics: a modern approach</i> . Mason, OH: Thomson/South-Western; Chapters 1, 2, 3, 4, 5, 6, 8. Verbeek, Marno. 2008. <i>A guide to modern econometrics</i> . Chichester, England: John Wiley & Sons; Chapters 1-4, 6. Judge et al. 1988. <i>Introduction to the theory and practice of econometrics</i> . Wiley, 2nd edition.	2 WLH
Course: Econometrics I (Exercise) <i>Contents:</i> The practical deepens the understanding of the lecture topics by applying the methods from the lecture to economic problems and data, and reviewing and intensify theoretical concepts.	2 WLH
Course: Econometrics I (Tutorial) <i>Contents:</i> The tutorials are small classes with max. 20 students, which give room for applying the concepts to specific problem sets and discussing questions, that students might encounter regarding the concepts addressed in the lecture and practical. A part of the tutorial are hands-on computer exercises using the software R. This enables students to conduct regression analysis in practice and prepares them for others (applied) courses.	2 WLH
Examination: Written examination (90 minutes)	6 C
Examination requirements: Linear regression models, generalized linear regression models. OLS, GLS, EGLS estimation. Multiplikative heteroskedasticity, autocorrelation. LM specification testing, Durbin Watson test. Convergence in probability, convergence in distribution. Asymptotics (consistency, asymptotic normality) of OLS estimators. IV estimation, GMM estimation.	
Admission requirements:	Recommended previous knowledge:

none	Notwendige: Mathematik (lineare Algebra), Statistik. Erwünscht: Einführung in die Ökonometrie (oder vergleichbare Vorlesung)
Language: English	Person responsible for module: Prof. Dr. Helmut Herwartz
Course frequency: each semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 1 - 2
Maximum number of students: not limited
